ENPM662 Introduction to Robot Modeling - Fall 2021

Homework - 1

Total - 50

For the problems from 1 to 3 given below, find the x , x' and x'' for the respective time t_1 , t_2 , and t_3 as per the graph. Here x is the position, x' is the velocity, and x'' is the acceleration.

Notes:

1. You can assume that the static, kinetic, and limiting friction values to be the same.
2. The force at time t_1 is the same as the force at time t_2 .
3. The mass M should be considered for calculating the positional data. The value of position should be where mass M is at that instant. For example, when two masses (M , m) are together and even when the mass m falls out from the top of the mass M .
4. To solve problem three you should use the energy method.

Draw free-body diagrams to show your solutions. Show your work to get full credits.

Problem 1)

10

Mass $M = 20 \text{ kg}$ and mass $m = 10 \text{ kg}$

$g = 10 \text{ ms}^{-2}$, $t_1 = 10 \text{ secs}$, $t_2 = 15 \text{ secs}$ and $t_3 = 25 \text{ secs}$

μ_1 = Friction between two objects: M and $m = 0.6$

μ_2 = Friction between object M and ground = 0.4

Problem 2)

10

Mass $M = 20 \text{ kg}$ and mass $m = 10 \text{ kg}$

$g = 10 \text{ ms}^{-2}$, $t_1 = 10 \text{ secs}$, $t_2 = 15 \text{ secs}$ and $t_3 = 25 \text{ secs}$

Wheels masses: $m_1 = m_2 = m_3 = m_4 = 1 \text{ kg}$

μ_1 = Friction between two objects: M and $m = 0.6$

$\mu_2 = 0$

Moment of inertia of the wheels = $I = 0$

Problem 3)

20

Mass $M = 20 \text{ kg}$ and mass $m = 10 \text{ kg}$

$g = 10 \text{ ms}^{-2}$, $t_1 = 10 \text{ secs}$, $t_2 = 15 \text{ secs}$ and $t_3 = 25 \text{ secs}$

Wheels masses: $m_1 = m_2 = m_3 = m_4 = 1 \text{ kg}$

μ_1 = Friction between two objects: M and $m = 0.6$

μ_2 = Friction between object M and ground = 0.4

Radius of the wheels (m_1, m_2, m_3, m_4) = $R = 0.02 \text{ m}$

Moment of inertia = I

Problem 4)

10

Consider the figure below. Find the following homogeneous transformations between frames: H_1^0 , H_2^0 , and H_2^1 . Then show that $H_2^0 = H_1^0 H_2^1$.
